

Attention Solar Installers:

Salem Electric has had a decades-long commitment to the environment and energy conservation and continues to do so by offering programs, rebates and low interest loans for solar water heating, photovoltaic, and net metering systems.

As an Oregon Department of Energy certified solar technician, please be aware that prior to beginning any projects in our service area, installers should contact our office for more information.

All projects are required to meet local, state and national codes, as well Salem Electric's installation standards.

Net Metering

- Cooperative members are eligible for \$600 per kW for the first 3 kW and \$300 per additional kW, not to exceed 50% of the project cost.
- A low-interest loan option (\$7,500 maximum) is also available.
- Net metering projects are limited to 25kW. For any project generating more than 25 kW, Salem Electric's cogeneration and small power producer policy will apply.
